

Flaming Chalice International Security Information

The Flaming Chalice International (FCI) website is built on Squarespace, as a Content Management System. Squarespace leverages SSL certificates to encrypt data in transit between website end users and customer domains.

Squarespace offers HSTS (HTTP Strict Transport Security), which encrypts the content served during sessions and only allows Squarespace customer websites to be accessed via HTTPS.

Our payment processor, Stripe, is PCI-DSS (Payment Card Industry Data Security Standard) compliant. PCI-DSS is a framework for developing a robust payment card data security process, including prevention, detection, and appropriate reaction to security incidents.

Squarespace and Flaming Chalice International's website is PCI compliant. Sensitive card data is never handled by FCI or Squarespace. Data goes directly to the payment processor's (Stripe's) servers; neither FCI nor Squarespace has access to this information.
